

MASTER MOULD CLEANER

SPECIAL PLASTIC MOULD SEPARATOR

masterchem

acts fast

extremely effective

can be used on Aluminium

DESCRIPTION

THE MASTER MOULD CLEANER is a gel-like cleaning aerosol developed for the plastic industry, which, due to its consistency, can be excellently applied even on vertical surfaces. It can be used for both aluminum and steel injection molds, mainly for the removal of -burned-on deposits on plastics, but it also works exceptionally well for removing deposited mineral substances, burned-on oily or greasy residues, and gaskets - such as klingerit.

FIELDS OF USE

- Tools for the plastics industry
- Sealing solutions
- Chrome surfaces
- Mirror polished surfaces

MANUAL

Apply the MASTER MOULD CLEANER aerosol onto the surface. For stubborn or heavily burned-on residues, the procedure may need to be repeated. If necessary, use of a brush, cloth, or paper towel can assist in removing the residue. Where the surface allows and for more significant burnt-on residues, the use of abrasive material or a brass brush may also be considered. Shake the product before use, and it's recommended to ensure its homogeneity during application.

SIZE

400 ml
